

A complete prompt set designed to create a consistent Mediterranean poolside jewelry campaign combining natural skin texture, strong sunlight, sculptural architecture, underwater photography and high-end editorial aesthetics.

The prompts are built to maintain the same visual language across the entire campaign while allowing each frame to have its own composition and photographic character.

HOW TO USE

For the most consistent results, build each image using three parts:

1) Campaign Base Prompt

Defines the model, jewelry, location, lighting and overall visual identity.

2) Scene Prompt

Defines the pose, framing, camera angle and composition of each image.

3) Realism Lock

Adds photographic imperfections and helps prevent the polished AI-generated look.

For jewelry campaigns, using a real product image as a visual reference is strongly recommended.

CAMPAIGN BASE PROMPT

Luxury summer jewelry campaign featuring the same adult female model throughout the entire series. Mid-20s woman with light warm skin, blue-green eyes, medium brown hair wet and naturally slicked backward, strong natural eyebrows, subtle freckles, natural lips and minimal no-makeup makeup. She wears the exact same oversized sculptural gold five-petal flower earrings with finely textured metallic petals and a detailed gold center. Minimal taupe swimwear. The campaign takes place around a modern Mediterranean luxury villa swimming pool with turquoise water, warm white limestone and smooth white architectural concrete. Bright cloudless summer day with strong Mediterranean sunlight, realistic specular highlights on wet skin and naturally scattered water droplets. High-end European jewelry editorial photographed with an analogue-inspired medium-format aesthetic. Visible skin pores, peach fuzz, freckles, subtle blemishes, slight uneven skin tone, fine facial texture and individual wet hair strands. Natural facial asymmetry. No beauty retouching. No airbrushed or plastic skin. Subtle film grain, restrained contrast, natural highlight clipping, minor lens imperfections and realistic optical softness. No HDR. No CGI appearance. No overly polished commercial rendering.

OVER THE SHOULDER

The woman is sitting inside the swimming pool directly beside a thick white architectural pool wall. The camera is positioned slightly behind her left shoulder at approximately eye level. Her wet upper back and shoulder dominate the lower foreground while she gently turns her head three-quarters toward the camera. She looks downward and slightly sideways with a calm, distant expression. Her wet brown hair is combed naturally backward and falls behind her shoulders. One large gold flower earring is completely visible and becomes the main visual focal point. Small irregular water droplets cover her cheek, neck, shoulder and upper back. The model is placed slightly left of center. A white pool wall creates a strong vertical geometric shape along the left edge while turquoise swimming pool water fills the right side of the frame. Clear blue sky appears softly in the upper background. Strong directional midday sunlight comes from the upper right, producing bright reflections on the jewelry and subtle shadows beneath the cheekbone and jaw.

Camera: 85mm lens, f/2.2, ISO 100, 1/1600 sec.

Shallow depth of field, realistic full-frame fashion photography and subtle analogue grain.

QUIET PROFILE

Close three-quarter side portrait of the same woman seated beside the swimming pool. Her torso turns slightly away from the camera while her face is shown in a clean side profile facing right. She gently rests the side of her face against one hand, with her fingertips touching her cheek and temple. Her expression is quiet, contemplative and slightly detached. Wet slicked-back hair reveals individual strands and natural irregularities. One oversized gold flower earring is clearly visible against her hair and jawline. Small water droplets remain scattered across her cheek, shoulder and arm. The model fills the left half of the image while turquoise water occupies most of the right side. White geometric pool architecture remains softly blurred in the distance. Hard Mediterranean sunlight creates crisp but natural shadows and luminous skin. The gold earring catches small directional highlights.

Camera: 85mm prime lens, f/2.

Medium close-up portrait with shallow depth of field and subtle analogue softness.

ARCHITECTURAL PORTRAIT

The woman sits low inside a sculptural sunken white concrete pool lounge. The camera is positioned slightly above eye level and looks downward at a subtle angle. She leans forward onto a thick white architectural ledge with both arms loosely crossing in front of her. Her shoulders and face are directed toward the camera. She looks directly into the lens with a calm and confident neutral expression. Both matching gold flower earrings are visible. Her wet hair is pushed naturally behind her head. Fine water droplets cover her shoulders and forearms. Minimal taupe swimwear appears subtly beneath her arms. Large white architectural blocks surround her body, creating clean diagonal and rectangular shapes. Bright turquoise pool water occupies the upper part of the image. Strong Mediterranean sunlight produces crisp architectural shadows and warm highlights across the skin. Avoid perfectly symmetrical beauty lighting. Preserve subtle under-eye texture, pores, freckles and natural skin variations.

Camera: 50mm lens, f/2.8.

Slightly elevated perspective with a medium-format editorial character.

UNDERWATER EXHALE

The same woman is photographed fully underwater inside the turquoise swimming pool. Close-up portrait from upper chest to the top of her head. The camera is positioned horizontally underwater at face level. She floats vertically with her head tilted slightly backward and to one side. Her eyes are peacefully closed and her lips are gently parted as she exhales several naturally irregular air bubbles. Her wet brown hair floats softly behind her. One gold flower earring remains clearly visible and is subtly distorted by the surrounding water. Moving sunlight creates organic underwater caustic patterns across her forehead, cheekbones, neck, collarbones and chest. The water surface appears at the top of the frame with a distorted reflection of her head. Maintain realistic underwater color attenuation with turquoise and cyan tones while preserving believable warm skin undertones. Include subtle suspended particles, imperfect bubbles, slight chromatic aberration and natural underwater softness.

Camera: Underwater housing, 35mm equivalent lens, f/4.

Close focus with realistic optical distortion.

SURFACE GAZE

Frontal underwater beauty portrait of the same woman. Her shoulders are directed toward the camera while her face tilts subtly upward toward the surface. Her blue-green eyes remain open and gaze above the camera rather than directly into the lens. Wet brown hair floats naturally around her head, moving predominantly toward one side. Both large gold flower earrings remain visible. Several irregular transparent bubbles drift across her forehead, nose and lips, including a few larger bubbles near her mouth. The surface of the swimming pool appears immediately above her forehead and creates a distorted mirrored reflection of her face. Strong moving caustic light produces luminous organic patterns across her forehead, cheeks, nose, neck and upper chest. Preserve realistic underwater details: slightly clumped eyelashes, wet eyebrows, visible pores and freckles, subtle redness around the eyes and imperfect refraction.

Camera: 50mm underwater portrait lens, f/4.

Central composition with realistic optical irregularities rather than perfect digital symmetry.

UNDERWATER CLOSE-UP

Extreme underwater close-up of the same model. The face fills almost the entire vertical frame. The crop includes her forehead, eyes, nose and lips while one gold flower earring enters softly from the lower edge. Some parts of the forehead and chin are intentionally cropped to create an intimate editorial composition. She gazes slightly upward past the camera with blue-green eyes. Her lips remain gently parted. Two larger transparent bubbles sit close to her lower lip while several tiny bubbles naturally cling to the skin near the nose and forehead. Strong underwater caustic light creates intricate bright patterns across the forehead, nose bridge, eyelids, cheeks and chin. Preserve extreme micro-detail: eyebrow hairs, eyelashes, pores, freckles, fine texture, slight redness and subtle skin irregularities. The gold flower earring sits slightly outside the focal plane, producing a warm golden blur.

Camera: 85mm close-focus lens, f/2.8.

Very shallow underwater focus with subtle optical distortion, fine grain and slight color fringing.

SUN-KISSED

Close editorial portrait of the woman lying back on a minimal white poolside sun lounger. The camera is positioned above her left shoulder and angled downward toward her face. Her head tilts gently backward. Her eyes are completely closed and her lips remain naturally relaxed as she enjoys the strong summer sunlight. The side of her face and one gold flower earring dominate the composition. Wet brown hair spreads irregularly across the textured white lounger. Small water droplets remain on her forehead, temple, cheek, neck and collarbone. Direct midday sunlight produces a bright highlight across her cheekbone and nose while creating a believable shadow beneath her jaw and hair. A subtle sun flare catches the edge of the gold earring. Keep the composition tightly framed around the head, neck and upper shoulder.

Camera: 85mm lens, f/2.4.

Very shallow depth of field, analogue fashion photography and natural Mediterranean daylight.

OVER THE SHOULDER WIDE

Wider environmental fashion portrait of the same woman seated inside a recessed white architectural lounge surrounded by the swimming pool. The camera is positioned behind and slightly above her. Her wet back faces the camera while she turns her head over one shoulder and makes quiet eye contact with the lens. One knee is raised toward her body while one arm rests loosely across it. Minimal taupe swimwear is visible naturally from the back. Wet hair falls in separated strands down the center of her back. One sculptural gold flower earring remains clearly visible against her jawline. Large white angular pool walls create strong diagonal lines throughout the frame. Turquoise water forms the background while blurred Mediterranean vegetation and pale blue sky appear softly in the distance. Bright sunlight falls across her shoulders and upper back, revealing realistic water droplets, freckles and natural skin variations.

Camera: 50mm lens, f/2.5.

Environmental fashion portrait with moderately shallow depth of field and subtle film grain.

DIRECT GAZE

Front-facing poolside portrait of the same model. She remains low inside the pool and leans both forearms horizontally across a thick white stone pool ledge. Her hands overlap naturally in front of her while her chin rests just above them. She looks directly into the camera with a relaxed, almost expressionless editorial gaze. Her shoulders and arms are wet and covered with small irregular water droplets. Both gold flower earrings appear on either side of her face, partially emerging from the wet hair. Her face sits near the center of the composition. Her forearms create a strong horizontal foreground line while the white architectural ledge fills the lower portion of the image. Turquoise swimming pool water and white architectural elements recede softly into the background. Direct summer sunlight produces realistic highlights across her forehead and cheeks while one side of the face falls into a subtle natural shadow.

Camera: 85mm lens, f/2.

Focus precisely on the eyes with realistic background separation and analogue texture.

REALISM LOCK

Add this section to the end of every prompt. The final image must look physically photographed rather than AI generated. Preserve small photographic inconsistencies: uneven water droplets, imperfect wet hair strands, subtle facial asymmetry, visible pores, peach fuzz, slight redness, freckles, natural skin translucency and minor texture variations. Include slight lens softness, organic shadow falloff, optical highlight blooming, occasional clipped highlights, restrained contrast and fine photographic grain. Avoid waxy skin, excessive sharpness, HDR, perfect symmetry, fake bokeh, synthetic-looking water, perfectly smooth architecture, beauty retouching, CGI jewelry and overly polished commercial rendering. The image should feel like a real editorial photograph captured on location.

PRODUCT PRESERVATION

When using a real jewelry product as a reference image, add:

Use the uploaded jewelry image as the exact product reference. Preserve its original silhouette, proportions, petal count, surface texture, material, color and construction. Do not redesign, simplify, enlarge, shrink or reinterpret the jewelry. Maintain the same product identity across every image in the campaign.**

CONSISTENCY TIP

For a complete campaign, generate the strongest hero image first. Use that image as a visual reference for the remaining scenes whenever the model allows reference-image conditioning.

Model identity · Jewelry · Hair · Makeup · Skin tone · Location · Swimwear · Lighting direction · Color palette

Change only the *pose, framing and camera perspective* from image to image.

9 prompts. One visual world.

Built for campaigns that never needed a photoshoot. ♦
